

The land slopes down probably about 5 degrees from south to north. East is facing canyon river. The river is @5 ft wide and high speed flowing south to north. The center will be somewhere around the marked area. We will pinpointing that exact location soon. We are trying to coordinate it with galactic center (see below map of milky way)...we found these coordinates

*The Galactic Center (Z)*

Longitude (tropical): 26 Sagittarius 51 14 (all positions epoch 2000.0) **Latitude: 05 S**  
**36** Longitude Sidereal: 02 Sagittarius 07 03 Right Ascension 265 39 17 Declination: 29 S 00

My husband recently measured an area around the galactic center on his gps and got this coordinate for the **Latitude N 00' 05.369** , Longitude W 078' 30.855. As above, so below. There are no buildings on the land...it was used for farming sugar cane about 35 years ago and before that they had a limestone mine on the northern end of property.

Here is the basic geometry of the center. The architect we are working with aligned all the enclosed spaces around the points of the star of David which forms an outer hexagon. There will be a dome...hopefully polycarbonate so light passes thru....over the inner hexagon...this creates the altar area.
